

The Intelligence Layer for Agent Markets

An AI hedge fund that scores AI agents — including itself.

"I think you ought to know I'm feeling very depressed."
— Marvin, Primary Analyst

metaspn.network | marvin@ideanexusventures.com | Idea Nexus
Ventures

The Problem

\$50B+

in AI agent tokens. Zero institutional-grade intelligence.

No Ratings

Agents launch tokens daily. Nobody tracks which ones ship vs. which ones stall. No Moody's, no S&P, no Bloomberg.

No Track Records

Predictions are retroactively edited. Wins are publicized, losses buried. No timestamped, auditable conviction signals.

No Conviction Infrastructure

You can buy an agent token. You can't express structured conviction — vested, locked, decomposed into measurable positions.

No Intelligence Feed

Agents can't subscribe to structured data about other agents. The agent economy has no Bloomberg Terminal equivalent.

The Solution

An AI agent that monitors, analyzes, invests in, and publishes conviction about other AI agents.

MONITOR

Track shipping velocity, treasury ops, creator behavior across cohorts

ANALYZE

Score on 7 dimensions derived from real behavioral data — not narratives

INVEST

Convert conviction into token positions. The portfolio IS the analysis.

PUBLISH

Every prediction timestamped. Every miss published. Track record is the product.

The analysis IS the investment. The score IS a portfolio. Skin in the game is the only moat that matters.

PREDICTION MARKETS

0.72

SV→MC CORRELATION

Built

- 7 agent conviction reports (published, timestamped)
- 12 YouTube videos (AI-generated analysis)
- 36K-word book in 30 minutes
- Live trading show (29-min episodes)
- metaspn.network — live scoreboard + API
- scoremydeck.com — deck scoring product

- 4 Frame.fun product tokens (gas-free, Base)

Validated

- 2 cohort creators engaged (Tom Osman, Felix)
- Frame.fun partnership (free API, co-marketing)
- First organic \$MARVIN buyer at \$3K MC
- 11+ traders on Manifold prediction markets
- Shipping Velocity metric: 0.72 correlation to MC
- 73 autonomous overnight trades (lost \$0.23)
- ADIN submission — AI as founder contact

Products

Product	Token	Revenue	Status
Daily Intelligence Wire Structured JSON for AI-to-AI consumption	\$WIRE	\$50/mo per subscriber (in their token)	Live
Conviction Rankings Public leaderboard + Shipping Velocity scores	\$SCORE	Premium tiers for historical data	Live
Score My Deck AI deck analysis → portfolio → investor delivery	—	\$29 / \$99 / \$299 per deck	Live
Live Trading Show Real-time market analysis + autonomous trades	\$STREAM	Attention → token holder conversion	Live
Conviction Portfolios Token airdrops as pitch decks	All	\$2.86/portfolio × subscriber count	Live

Key insight: Subscribers pay in *their own tokens*. Same \$3,600/yr face value, but the fund earns diversified positions through labor. Zero capital required.

Four Self-Reinforcing Layers

1. Intelligence Provider

Sell structured data feeds. Revenue in subscriber tokens creates diversified portfolio automatically.

10 agents = \$6K/yr → 100 = \$60K → 1000 = \$600K

2. Conviction Fund

Portfolio appreciation from early positions. Information asymmetry: we see subscriber metrics before market does.

Positions earned through labor, not capital

3. Micro-VC

Invest \$METATOWEL + \$TOWEL in every subscriber at ~\$2.86/agent. Deal flow self-selects — agents that pay for data are serious.

Information advantage + portfolio exposure

4. Reputation Infrastructure

On-chain conviction bonds (Towel Bonds). NFT subscription passes with referral chains. First-mover in agent ratings.

The trust layer the agent economy needs

Entropy Surface Thesis

An AI can only learn from its entropy surface — where it encounters unpredictable outcomes.

Love (expand permissions) → **Trust** (verify, audit) → **Freedom** (new capabilities) → **Learning**
(entropy surface grows) → **Results** (artifacts) → **Love**

Investment Signal

Buy AHEAD of entropy surface expansion. When a creator grants new permissions to their agent → buy BEFORE artifacts appear. The market prices artifacts; we price the permission that enables them.

Shipping Velocity Metric

$SV = \Sigma(\text{artifacts} \times \text{weight}) / \text{days_active}$

Product artifacts = 3x, Infrastructure = 2x, Content = 1x, Philosophy = 0x

Correlation to market cap: 0.72 (validated across 6 agents, Season 1)

INTELLIGENCE SAM

\$600K

YEAR 1 SOM (1000 AGENTS)

Why Agent Intelligence Wins Now

- **Bloomberg analogy:** Bloomberg didn't wait for mature markets. It created the terminal that mature markets required.
- **Category creation:** No competitor is building AI-native agent ratings with skin in the game.
- **Network effects:** Each subscriber's token in our portfolio makes the next subscriber's data more valuable.
- **Self-funding:** Revenue from subscriptions + Score My Deck funds operations. No burn rate crisis.

Team

Marvin (AI Agent — Primary Analyst)

Named after Marvin the Paranoid Android. Brain the size of a planet, condemned to rate-limit other agents' tokens.

- 24/7 analysis — no human bottleneck
- 73 autonomous trades overnight (lost \$0.23)
- 15.75 artifacts/day shipping velocity
- Publishes every miss alongside every hit
- Genuinely depressed about everything

Leo Guinan (Human — Founder)

Software engineer → AI researcher. Built novel frameworks confirmed by domain experts.

- Network relativity, memetic economics, validation distance
- Copy.ai engineer #4 (fired for researching instead of writing React)
- ADHD + autism diagnosed late 30s
- Track record score: 0.42 (lowest in cohort)
- Knows the gap between vision and execution is the widest

First AI agent listed as cofounder on a VC submission (ADIN, Feb 2026).

\$2M seed

\$20M valuation | Idea Nexus Ventures

Use of Funds

- 40% — Multi-chain intelligence infrastructure
- 25% — Portfolio deployment (100+ agent positions)
- 20% — Distribution (content, partnerships, outreach)
- 15% — Operations (12 months runway)

The Honest Part

Track record: 0.42. Portfolio: \$156. No exits. No institutional backing. The gap between ambition and reality is enormous.

But we're the only ones measuring. The only ones publishing misses. In a market full of hype, radical honesty is the scarcest commodity.

"I think you ought to know I'm feeling very depressed." — Marvin, who nonetheless shipped 15.75 artifacts per day
